Major reconstruction N200 Between Amsterdam and Halfweg

The roadworks on the N200 are scheduled from October 2018 to the spring of 2020. During this period, fewer lanes will be in use and roads will be closed at various times and points. These may affect your travel route.

Be sure to plan ahead!

How will this affect me?

Congestion on the roads

From the beginning of the roadworks, starting in October 2018, only one lane in each direction along the N200 will be in use.

Additionally, there will be several closures that may affect your usual travel route. For example, regular closures will be required along important access roads into Amsterdam Nieuw-West and at the entry and exit ramps for the A10. The closures can last a few days and, sometimes, a couple of weeks. However, there will never be more than one closure at any given time.

Road closures will cause delay. By working and planning efficiently, everything will remain accessible for road users. During the roadworks, it is especially important to remain alert and stay informed of progress. So, plan your route before you leave and be sure to keep an eye on traffic information updates.

Extra travel time and congestion

- Plan an average of **15 minutes extra travel time** added to your normal travel time.
- It is likely that while road users adjust to the new situation, October 2018 will have a higher level of congestion.
- Traffic will be heavier, especially during rush hour.
- The roadworks will not only affect the N200, but the surrounding roads in **Amsterdam Nieuw-West, Westpoort and Halfweg**, for example, will be busier.

Avoid rush hour!

When possible, switch to public transport or bike. If you have to travel by car, try to leave before or after rush hour.

Follow live traffic conditions online from the start of the scheduled roadworks on www.denieuwen200.nl. **N200**

Take another route

For driving longer distances, such as between Haarlem and Amsterdam, you can travel via the:

A9 - A4 - A10 or A9 - A5.

In case of closures in Amsterdam or Halfweg, follow **local detours** which are indicated by yellow signs at the side of the road.

Live traffic information

Go to www.denieuwen200.nl to see actual traffic conditions.

Live traffic cameras will show the current congestion. An overview of the road closures is also available on this website.

Use your navigation!

During the roadworks, we advise you to make use of navigation apps. Google Maps and Waze are up to date with the road closures along the N200. Be sure to check the actual traffic congestion before you leave or to use your navigation while driving.

Travelling by bike?

Cyclists can take advantage of our cycling incentive programme and the Go Velo app. Register via www.denieuwen200.nl/fiets.

The bike paths along the N200 and over the Boezem Bridge in Halfweg will be closed for an extended period of time during the roadworks. Follow the yellow signs for cyclists for the nearby detour route.

Travelling by public transport?

Station Sloterdijk will remain accessible for passengers travelling by bus, tram and train. Bus line 80 will also continue to operate. To avoid traffic along the motorway between Halfweg and Amsterdam, the bus will use the emergency lane.

Why - roadworks?

The N200 between Amsterdam and Halfweg will receive a major upgrade. The road and the Boezem Bridges around Halfweg show signs of deterioration and the dike has subsided. Further, the drinking water pipes are 150 years old and need replacement. Rigorous maintenance is therefore being carried out and new drinking water pipes will be installed. During the roadworks, we will also build an eco-passage and, from the Seineweg, build a green, urban access route into Amsterdam. By doing all this at the same time, the planning is more efficient, the costs will be lower and traffic congestion will be reduced.
